

13-7 Inverse Trig Functions

Objective:

Solve equations by using inverse trig functions.

Find the values of expressions involving trig functions.

Trig Functions and Their Inverses

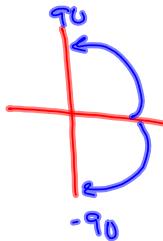

A) Graph $y = \sin x$

B) Discuss inverse and why we limit the domain.

Inverse sin, cos, and tan

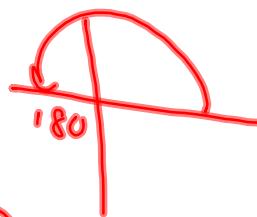

$$y = \text{Sin}^{-1} x \text{ or } y = \arcsin x$$

$$-90^\circ \leq y \leq 90^\circ$$

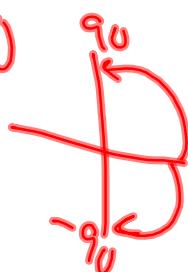

$$y = \text{Cos}^{-1} x \text{ or } y = \arccos x$$

$$0^\circ \leq y \leq 180^\circ$$

$$y = \text{Tan}^{-1} \text{ or } y = \arctan x$$

$$-90^\circ < y < 90^\circ$$

Write each equation in the form of an inverse.

Ex 1) $\sin 30 = \frac{1}{2}$

$$\sin^{-1}\left(\frac{1}{2}\right) = 30^\circ$$

Ex 2) $\cos a = b$

$$\cos^{-1}(b) = a$$

Solve each equation by finding x to the nearest degree.

Ex 3) $\sin x = \frac{\sqrt{3}}{2}$

$$\sin^{-1}\left(\frac{\sqrt{3}}{2}\right) = x = 60^\circ$$

Ex 4) $x = \arctan 1$

or $\tan^{-1}(1) = x = 45^\circ$

Find each value. Write angle measures in radians. Round to the nearest hundredth.

Ex 5) $\cos^{-1}(-.5) = 2.09$

Ex 6) $\sin(\sin^{-1}.5) = .5$

Ex 7) $\sin(2\arcsin .5) = .87$
