

Algebra Ch. 11 Linear Systems

11-1 Warm-Up

$$y = mx + b$$

← y-int start
 slope = $\frac{\text{rise} \uparrow \downarrow}{\text{run} \leftarrow \rightarrow}$

1. Graph $y = -3x + 4$

$m = \frac{-3}{1}$ $\downarrow 3$ start
 $\uparrow 1$

2. Graph $2x + y = 5$

$y = -2x + 5$
 $m = \frac{-2}{1}$ $\downarrow 2$
 $\uparrow 1$

Algebra 11-1 Introduction to Systems

Word	Definition	Example
System of Equations	<p>~ more than one equation</p> <p>And</p>	$\begin{cases} y = 2x + 1 \\ y = 5x - 8 \end{cases}$
Solution of a System	<p>→ where the lines intersect</p> <p>→ The point is the solution.</p> <p><u>Note</u>: Parallel Lines have No Solution.</p>	(x, y) $x =$ $y =$

Finding Solutions by Graphing

1. Graph each equation.

1. Graph by making a Table OR

2. Graph by using $y=mx+b$ where $m =$ Slope and $b =$ y-intercept.

1. The point of intersection is the solution.

* If the lines do not intersect, then there is No Solution.

Examples

1. Find the solution to the system.

$$y = 1.5x - 10$$

$$x + y = 0$$

$$1.5 = \frac{1}{2} = \frac{3}{2}$$

$$y = \frac{3}{2}x - 10 \quad \begin{matrix} \text{Start} \\ m = \frac{3}{2} \uparrow \\ \quad \quad \downarrow \end{matrix}$$

$$y = -x + 0 \quad \begin{matrix} m = -\frac{1}{1} \downarrow \\ \quad \quad \quad \rightarrow \end{matrix}$$

Solution (4, -4)

Check $x=4$
 $y=-4$

$y = 1.5x - 10$	$x + y = 0$
$-4 = 1.5(4) - 10$	$4 + (-4) = 0$
$-4 = 6 - 10$	$0 = 0 \checkmark$
$-4 = -4 \checkmark$	

2. Find the solution to the system.

$$y = 3x - 1$$

$$y = 3x + 2$$

$$m = \frac{3}{1}$$

$$m = \frac{3}{1}$$

No Solution

* parallel lines
